

Prentið út, klippið, plastið og klippið aftur. Mest er af lægri tölunum. Prentið hverja blaðsíðu í einum lit þannig að hver „tölustafur“ eigi sinn lit. Notið eins þykkt karton og prentarinn leyfir. Ég hef notað 180 og set eitt karton í einu í prentarann. Leikurinn gengur út á það að spjald með 10 ferningum er sett á borð eða gólf og síðan á að raða spjöldum saman þannig að þau endi alltaf með útkomuna 10. Það er líka hægt að „reikna“ upp í aðrar tölur. Þau yngri geta t.d. byrjað á að prófa sig með að finna útkomuna 6.
