

Big cards with the alphabet

- In the computer you make all the letters in your alphabet. One letter with both big and small letters on each A4 carton. For this project I used Century Gothic font in size 350 and I used Word Art to make them like you see on the picture below. I print the letters and used a marker to mark the way the letter is written. Then I put this in the laminator machine. The children use whiteboard pens to write the letters.
- You can also let the children choose what letter to print and they can glue something in the letter. You can print them on thick carton paper and use needle to make holes in the letters. The children can then have needle and thread and stitch the letter. On the plastic covered letters you can use clay to make the letter.
