

Put the same amount (for the younger ones)

What you need:

- card from applebox (the card the appels are placed in a applebox – se pictures below)
If you don't have that you can use a carton paper
- Black permanent marker pen
- Something that can be put in the holes on the applecard (here I use big pins)

What you do:

- Write the numbers 1-5 in the holes on the apple card

The game:

- The kids have to put the same amount of pins in the holes as the number says f.e. 4 pins in the hole with the number 4

Note:

- This was made for 2 and 3 year olds but if you want to make this for older kids you write higher numbers in the holes and use smaller things to put in them.
- You can also use yogurt boxes and then you write the numbers in the bottom of the box or on the side.
